TIRANA 2022

1. Evaluation of the team members
(Please evaluate with grades the work done by your team members, and a short description of what they did.)

No	Name	*Team effort	*Time management	*General grading	Description
1	Gerhard Allamani	10	10	10	Worked on the backend
2	Aleksia Bega	10	10	10	Worked on the frontend
3	Christian Lico	10	10	10	Worked on the frontend
4	Tedi Pellumbi	10	10	10	Worked on the project testing
5	Ergys Kojtari	10	10	10	Worked on the backend

(Explanation: * The grading given is from 1-10)

2. Evaluation of the team members

As the leader of the team I will be evaluating every member of the team.

Gerhad Allamani - always ready to work on the projects hardest tasks. He did so in a timely manner and always showed great initiative for the different tasks to be handled. He showed great skill and adaptability when it came to coding handling different parts of the code.

Aleksia Bega – very attentive with the details of the project she handled her tasks in a timely manner just like the rest of the team. She brought some of her work experience on the project, expecially when it came to coding which helped tremendously with the project.

Christian Lico – showed great enthusiams for the project and kept pushing the team with his ideas, expecially when it came to the frontend look of the project. Creative and resilient he pushed through his more "mild" experience in coding and showed great effort when it came to learning new things for the sake of the team.

Tedi Pellumbi – just like the other team members, Tedi showed to be very helpful with the progress of the project and tried well and beyond his limited coding prowess. When it came to testing the product, our web application, he showed great attention to detail and meticulously combed through the web app to find it's hidden bugs.

Ergys Kojtari – we can call Ergys the "Jack of all trades" since this was basically what he did during the project, he had a hand in almost everything and was ready to give his opinion in most doings of the project. With his coding prowess he helped in a lot of different tasks as it partains to diagrams (the more technical ones like EDR and the likes) as well as coding.

Overall the project would not have been possible without the help of every team member giving their support and working together.

3. Work done by me

As leader I had to manage the team, have the final say in certain decisions as well as the resonsibility of finishing the project. I, just like most others completed different diagrams, like DFD, swimlane, use cases,ect. While completing the different diagrams I had also the responsibility of completing the requirements document for the project as well as the meeting raports. When it came time to coding I was tasked with helping with the backend of our web application. I specifically worked with the patient and admin part of the code
